Inter-site correspondence analysis suggests presence of imports not a direct indicator of Romanisation pre conquest. Use and copying of selection of imports because of their ability to fit into existing indigenous social practices. Social importance of drinking and eating at this time reflected in deposition of ceramic consumption refuse together in pits, wells and shafts. Wine entering a society already used to communal drinking (beer) and feasts. Prestige practice rather than prestige goods. Existing models and critique, putting imports into context – vessel form, pot function and depositional traits.
